

With SWEPCO, being energy smart is easy.

Reduce operating costs, boost customer satisfaction and advance your company's sustainability commitment through energy efficiency improvements.

SWEPCO Louisiana's Commercial and Industrial Energy Efficiency Program provides incentives for qualifying energy-efficient improvements that reduce peak electric demand and save energy in commercial and industrial facilities. Incentives are based on verified electric energy and demand savings and are calculated using the incentive rate table. SWEPCO's Energy Advisors are available to help you identify projects, calculate financial impacts and provide application assistance.

Understanding Your Facility's Energy Use

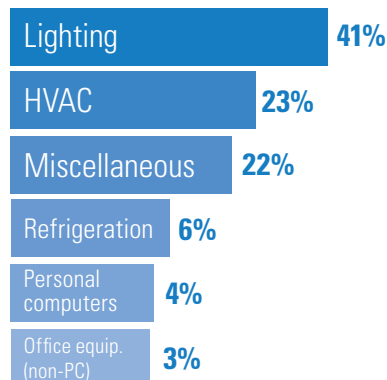

Much of the \$8 billion that healthcare organizations spend annually on energy is wasted on inefficient and outdated equipment, such as lighting and HVAC systems. SWEPCO shows you how your facility uses—and wastes—energy so you are best-equipped to decide which energy-improvement projects and corresponding incentives will help you cost-effectively reduce consumption and save money.

Finding Ways to Save Energy

SWEPCO incentives cover a range of projects. These include:

- Upgrading HVAC equipment and installing economizers.
- Installing an energy management system that provides precision control over HVAC, lighting and other equipment.
- Sealing duct system and building shell leaks.
- Using computer power-management software to monitor and control energy consumption.
- Installing demand-controlled ventilation systems.
- Replacing overhead lighting with premium T5 or LED lamps.
- Upgrading exit signs to LED or electroluminescent signs.
- Installing lighting controls and occupancy sensors.
- Performing a retrocommissioning study on large inpatient facilities to ensure building performance.

Typical Electricity Use for Outpatient Facilities
