

About the CoolSaver Measure

- The CoolSaver A/C Tune-up Measure is designed to overcome the market barriers that prevent customers from receiving high-performance air conditioning and heat pump system tune-ups.
- Energy savings are captured through identification and correction of air conditioning and heat pump system inefficiencies during the tune-up.
- The measure provides energy savings to customers and incentives to contractors, training on best practices and discounts on state-of-the-art tools for contractors to conduct system tune-ups as well as ensure replacement systems run at optimal efficiency.

Superior Service

As a participating contractor, you are responsible for ensuring the following areas are evaluated during each CoolSaver Tune-up:

- Airflow correction
- Cleaning of indoor blower, evaporator coils and condenser coils.
- Correction of refrigerant charge
- Clean or replace filter if necessary

How to Participate?

1. Contact your local SWEPCO energy advisor to receive a CoolSaver contractor agreement form and contractor manual.
 2. Complete the contractor agreement form and submit along with all required documentation to your local SWEPCO advisor.
 3. Purchase the required toolkit and sign up to attend the required CoolSaver training class.
 4. Once a contractor has successfully passed the training course they will be given a Technician Qualification number and will be able to start completing tune-ups.
 5. Once a tune-up has been completed, the contractor will apply an instant discount on the customers invoice and then submit the required tune-up data and documentation.
 6. Once the tune-up data has been reviewed and accepted, the contractor will receive the incentive payment for the completed tune-up.
- Please contact your local SWEPCO energy advisor, **Rob McCubbins**, at 318-861-8430 or Robert.Mccubbins@CLEARresult.com for more information or to discuss any questions.
