

Stop The Leaks And Save up to 40 Percent.

What's in It for You?

Sealing the ducts in your home can:

- Put money back in your pocket.
- Improve your home's ventilation and humidity control.
- Keep your home cooler in summer and warmer in winter.
- Lower your energy usage by up to 20 percent.

Why Should You Seal Your Ducts?

If your home's ducts aren't airtight, they can increase your heating and cooling costs by up to 40 percent. Just a few quick repairs from a participating contractor can stop the leaks and seal in the savings.

How Does It Work?

After evaluating your heating, ventilation and air conditioning system, a participating contractor will use an airtight combination of foil tape and mastic to completely seal any leaks.

Typical problem areas include:

- Breaks or disconnections.
- Discolored or torn insulation (signs or air leakage).
- Odd angles.
- Gaps around vents and intakes.

Where Do I Start?
